

MAKO

Bahamas Blue 5X Lake & Pond Dye

32 oz liquid concentrate | One bottle treats 1 acre at 4-6 ft

MAKO Bahamas Blue gives contained ponds and lakes a richer, cleaner-looking Bahama-blue tone while helping reduce sunlight penetration. The 5X liquid concentrate pours easily from shore or by boat and is built for season-long visual appeal.

Fast visual change

Rapidly disperses for quick color development after application.

5X concentrate

Compact 32 oz bottle delivers full-acre coverage.

5X

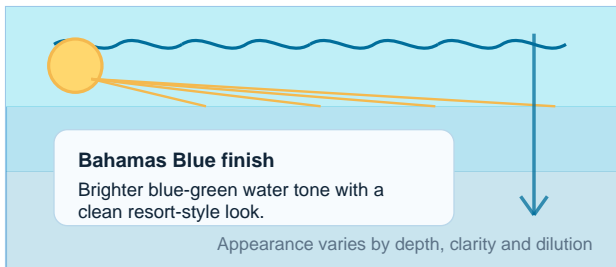

Immediate water use

Recreation and fishing can continue right away when used as directed.

Water Color + Light Shading

Fast visual color with reduced sunlight penetration

Treatment Guide (per surface acre)

Use case	Dose	Notes
Initial full-acre treatment	32 oz	Treats 1 acre at 4-6 ft avg depth
Smaller or partial pond	Scale	Apply evenly by area and desired color
After dilution or fading	As needed	Rain, evaporation and outflow affect color life

Best for contained or very low-outflow waters. Always follow label directions.

Why professionals choose MAKO

- 5X liquid concentrate in a quart-size bottle that is easier to store, handle and pour
- Rapid dispersion with simple shoreline or boat application and no pre-mixing required
- Designed for contained or low-outflow waters with year-round application flexibility
- No swimming or irrigation restriction when used as directed; always follow the label

How to apply

- 1) Estimate surface acres using length x width divided by 43,560.
- 2) Shake well, then pour along the shoreline or distribute by boat.
- 3) Apply evenly across contained or very low-outflow water.
- 4) Reapply after heavy dilution or when the desired color fades.

Performance expectations

Color develops quickly as the dye disperses. Color life varies with water clarity, depth, rainfall, evaporation and water exchange; in suitable low-outflow waters it can last for several months. Use as part of a complete pond-management program.
