Re: Product Technical Certification Letter: Biological Pond/Lake Mode-of-Action and Non-Algaecide Statement

Dear Customer:

This letter shall serve to certify that, as of the date hereof, **NT-MAX Lake Treatment** is a microbial-based biological treatment product designed to support the natural biodegradation of organic muck, sludge, and accumulated organic waste in ponds, lakes, and managed waterbody environments.

NT-MAX Lake Treatment is not a chemical algaecide, herbicide, copper treatment, aquatic dye, flocculant, oxidizer, disinfectant, solvent, or masking agent. It is not formulated to chemically kill algae or aquatic vegetation, bind suspended solids, discolor water, or temporarily conceal water quality conditions.

NT-MAX Lake Treatment is a microbial-based biological treatment formulated with beneficial facultative microbial cultures selected to function across the variable oxygen conditions commonly found in ponds and lakes, including oxygen-rich water columns and low-oxygen bottom zones where organic material accumulates.

The beneficial microbial cultures in NT-MAX Lake Treatment use accumulated organic matter, decaying vegetation, bottom muck, and other nutrient-bearing waste as a food source. Through biological metabolism, these materials are progressively broken down and converted into simpler byproducts and microbial biomass, helping reduce the organic load that can contribute to recurring nuisance growth and poor water quality.

Should you have any additional questions, please contact Customer Service at service@newtechbio.com.

Sincerely,
